

The Aesthetics of Photography

A black and white photograph of a winding river through a valley. The river flows from the upper right towards the lower left, curving through a dense forest of trees. In the background, a range of rugged mountains with significant snow cover stretches across the horizon under a cloudy sky. The overall scene is a classic landscape photograph.

Written by Emma Gilette

"You don't take
a good photograph,
you make it"

- Ansel Adams

My Background in Art:

- Fine Arts Degree
(Painting & Drawing)
- Secondary Art &
Photography Teacher
(7 years)
- Numerous sales and
exhibitions (paintings,
drawings and photos)

Emma Gillette , *Mum's Violin*, acrylic on canvas, 2005

Some of my Photography

Definition of “Aesthetic”:

Adjective:

1. Having a sense of the beautiful; characterized by a love of beauty.

E.g. That photograph is aesthetically pleasing.

Noun:

1. The philosophical theory or set of artistic principles governing the idea of beauty at a given time and place:

E.g.. The Cubist aesthetic.

Why Learn Aesthetics?

Understanding Aesthetics will help you to:

- “See” the images around you,
- Capture images with maximum impact,
- Develop your visual vocabulary,
- Develop your “eye” for what “works”,
- Make you think & plan before you shoot, and
- Ultimately, improve your photography.

This Presentation Will Cover:

- **Art Elements**
line, colour, tone, shape, texture, space
- **Design Principles**
Balance, Emphasis, Contrast, Movement, Rhythm, Pattern, Repetition, Unity, Variety, Proportion, Scale
- **Design Concepts**
Composition, Juxtaposition, Perspective
- **Compositional Guidelines**
Rule of Thirds, Golden Mean, Leading Lines, Lead Room, Natural Framing, Rule of Odds, Simplify
- **How to develop your photographic “eye”**

Art Elements

The building blocks of all artworks:

1. Line
2. Colour
3. Tone
4. Shape (2D)
Form (3D)
5. Texture
6. Space

Caras Ionut

Line

Lines have character and personality and can communicate emotion

Martin Vlach

Horizontal lines

Suggests a feeling of rest and repose – they are calm & quiet

Canola Farm At Dawn by EOS20

Vertical lines

Are bold, strong & stable

G. Richard Anderson, *Vertical Blues*

Philippe Halsman, *Moustaches (Salvador Dali)*, 1954

Vertical lines

Can also communicate a feeling of loftiness and spirituality.

Dorit Thies, *Borderline*

Martin Stranka, *Between Light & Nowhere*

Diagonal lines

Diagonal lines show action, falling, leaning, or growing – they suggest a feeling of movement or direction.

Buckwhite, *Abstract Architecture in Blue II*

Dwarkan, *Introspection*

Curved Lines

Suggest comfort, safety, familiarity, relaxation. They recall the curves of the human body, and therefore have a pleasing, sensual quality.

Convex Sunlines by Suncent

Winter Morning, Everton Hills by Kevin McGennan

Edward Weston, *Nude*

Curved Lines

Can also suggest confusion, turbulence, even frenzy.

Bill Wadman, *Motion*

Kyle Thompson, *Untitled*, 2012

Daniel Montero, *Blue Color Photography*

Directional or Leading Lines

Move the viewer's eyes throughout and into a photograph.

Swin, *The Way It Grows*

Bob Larson , *Enter*

Directional Lines

Aren't always straight; the "line" of a model's body can create an "S" shape that will lead the viewer's eye all along her body

Oleg Oprisco

Mario Testino, *Anne-Hathaway*,
for *Vogue US*, Nov. 2010

Straight Lines

Provide structure and direction to a composition. While **horizontal and vertical lines** in combination communicate stability and solidity.

Kai Ziehl

Pointed or jagged lines

Can express uncertainty or anger

Lauren Morris, *Untitled*

Matteo Pontonutti, *Manifestations*

Meandering lines
are whimsical and happy

Larsvande Goor, *Untitled*

Flowing lines
are graceful and mystical

Tim Walker, *Private World*

Colour

Colour consists of:

- Hue (another word for colour)
- Intensity / Saturation (brightness or dullness)
- Value (lightness or darkness)

Tints, Shades and Tones

- Tints are made by adding white to a pure hue
- Shades are made by adding black to a pure hue
- Tones are made by adding grey to a pure hue

Tints - adding white to a pure hue:

Shades - adding black to a pure hue:

Tones - adding gray to a pure hue:

How to use colour

- Use colour schemes to enhance, appeal or make an impact in your work
- Understand the colour wheel

Zhangye Danxia Range, Photo by: Image China

Warm Colour Schemes

- Are vivid and energetic
- Tend to advance in space
- When shooting in the morning or evening colours will look warmer

Alex Cassels

Cool Colour Scheme

- Create a calm and soothing impression.
- They tend to recede in space
- When the sun is high in the sky colours will look cooler.

Analogous Colour Schemes:

- Lie alongside each other on the colour wheel
- They usually match well and create serene and comfortable designs
- They are harmonious and pleasing on the eye
- Make sure you have enough contrast when choosing an analogous colour scheme. Choose one colour to dominate, a second to support. The third colour is used (along with black, white or grey) as an accent.

Complementary Colour Schemes

- Opposite each other on the colour wheel
- The high contrast of complementary colours creates a vibrant look especially when used at full saturation. This colour scheme must be managed well so it is not jarring.
- Works well when you want something to stand out
- Often used in advertising

Afghan Girl, Copyright © Steve McCurry / Magnum Photos

Tim Walker, Puppet series

Triadic Colour Schemes

- A triadic colour scheme uses colours that are evenly spaced around the colour wheel (forming a triangle).
- Triadic colour schemes tend to be quite vibrant, even if you use pale or unsaturated versions of your hues.
- To use a triadic harmony successfully, the colours should be carefully balanced - let one colour dominate and use the two others for accent.

Primary Triadic Colour Scheme

Bluesrose, *Chairstract. IV*

Secondary Triadic Colour Scheme

Tertiary Colour Scheme

- Greys and Browns (formed by mixing two secondary colours – hence 3 primaries)
- Tertiary colours are sophisticated
- Feel Natural
- Often add a melodic or aged feeling to a photograph

*Stay Beside Me Whisper To Me "Here I Am"
And The Loneliness Fades...* by James Leader

Untitled by Franck Balestracci

Angel by Sharon Hammond

Monochromatic Colour Scheme

- Creates bold and dramatic photographs.
- Try getting in closer to subjects, isolating one colour from its surroundings and making the colour the focal point.
- Focus becomes the tone or the meaning of the image / colour.

Holly Henry

Colour Psychology

Colours can have emotional impact. E.g:

- Red = love, lust, excitement, rage
- Yellow = happiness, warmth, optimism
- Green = envy, peaceful
- Blue = masculinity, corporate, trust, strength
- Pink = sophistication, sincerity
- Purple = spirituality, power, authority, creativity
- Black = grief, fear, power
- White = purity, sincerity, happiness

Colour Psychology and Branding

OPTIMISM CLARITY WARMTH
FRIENDLY CHEERFUL CONFIDENCE
EXCITEMENT YOUTHFUL BOLD
CREATIVE IMAGINATIVE WISE
TRUST DEPENDABLE STRENGTH
PEACEFUL GROWTH HEALTH
BALANCE NEUTRAL CALM

Brand Examples: Nikon, UPS, Denny's, NBC, Google, Nickelodeon, Hooters, Amazon, Sprint, IMDB, National Geographic Channel, CAT, Chevrolet, Pennzoil, Subway, Kellogg's, Kmart, Oracle, Payless, Crayola, Nintendo, YouTube, Coca-Cola, CNN, Netflix, Toys R Us, Shell, eBay, Syfy, Monster, Big Brothers Big Sisters, Aussie, Virgin, Exxon, Fanta, IKEA, Dell, JPMorgan, Flickr, Mobile, Barbie, ACE, Starz, Best Buy, HP, NASA, Lynx, Lays, Frito Lay, Oreo, Welch's, Canon, KFC, Harley-Davidson, Hertz, Goodyear, A Planet, Tropicana, Spotify, Hess, Starbucks, Holiday Inn, Public, Walmart, Oral-B, Pfizer, Vimeo, Facebook, IBM, Volkswagen, Hallmark, Dairy Queen, Avis, Nesco, Heinz, Target, Ace Hardware, Rolling Stones, LEGO, Fanta, Starz, Best Buy, DHL, Harley-Davidson, Hertz, Goodyear, Sun Clips, Ferrari, Schepers, McDonald's.

Icons: Yin-Yang, Peace, Fist, Lightbulb, Lightning, Smile, Thumbs Up

Tone

- The lightness or darkness of a colour or shade
- Can add drama, liveliness and impact to your images.
- In photography – it is created by using light
- Light tones advance, dark tones recede.
- Black and white photos rely completely on tone because of their lack of colour.
- Tone can be used to make your subject stand out through contrast.

Julian Escardo

Strong tonal contrast

- Is powerful, dramatic and emotive
- Isolates focal point effectively

The Reckoning by Matteo Pontonutti

MoonChild by Suzana Ristic

Chiaroscuro in Painting:

- Italian word meaning “light dark”.
- Used to describe the skilful balance of light and dark in a painting, with strong contrasts to create dramatic effect.
- Chiaroscuro emphasized shadows using harsh lighting to create a sense of depth and volume in painting
- The paintings of Caravaggio and Rembrandt are good examples.

The Matchmaker by [Gerrit van Honthorst](#)

Rembrandt, *Self Portrait*

Chiaroscuro in Photography:

In photography, black and white images that utilise chiaroscuro are often referred to as “noir”. Noir is a technique that involves using “hard lights” (those that leave sharp edged shadows). Try using a small or narrow source of light. Tools such snoots and honeycombs will help you to achieve this effect.

Ryan Berry, *All of these Emotions of Mine - Chiaroscuro Self Portrait*, 2010

Kasia D

Monotone

- Images described as “Monotone” have very little tonal variation
- Can create a feeling of eeriness or voyeurism.

Mirai, *Monotone Landscape*

Graham Farquhar, *Naked and Lost*

Shape

- An enclosed area defined and determined by other art elements (2D)
- Can be organic or geometric
- Can be used as “frames” for your subjects

Itsy Bitsy Drops by Sharon Johnstone

Bluerose

Geometric Shapes

- Have perfect, uniform measurements and don't often appear in nature
- E.g. circles, triangles or squares
- Geometric shapes have an industrial, hard-edged, man made feel
- Often lack emotion/mood

Emily Blincoe, *Citrus*

Helder Santos, *Shift-05*

Organic Shapes

- Found in the natural environment
- Are free-form, curving, unpredictable and flowing in appearance.
- Can be sensual
- Add mood/emotive quality

Edward Weston, *Nude*, 1936

Edward Weston, *Pepper*, 1930

- The addition of organic shapes to a composition dominated by geometric structures can add an unpredictable energy to your photos.

Using Shapes to “Frame” a Subject:

- Keeps the viewer’s eye inside the image
- Focuses attention on the focal point
- Can add meaning through juxtaposition

Tim Walker, British Vogue, 2008

Tim Walker, British Vogue, 2008

Adding frames in Post-Production

California Dreaming by John Poon

The Beat Of Black Wings by Michael Bilotta

Shadows and Silhouettes:

Focus the image on shape, as tonal detail is lost

Noell S. Oszvald

Marek Chaloupka

Guy Cohen

Implied Shapes

Zen Sutherland, *Implied Triangle*

Edward Weston, *Nude*, 1936

Robert Francois Photography

Form

- A 3-dimensional object, OR:
- A 2-dimensional object that appears to be 3 dimensional
- A triangle, which is 2D, is a shape.
- A pyramid, which is 3D, is a form.
- Form is what takes your two-dimensional photograph and makes it appear life-like and three-dimensional. This is usually achieved by controlling the light (tones) on your subject. It can also be created through using line & texture.

Talking To A Wall by James Leader

Space

Fototaker

- The area used or unused in an image
- Foreground, Middle Ground and Background
- Positive space (filled with subject)
- Negative space (empty or blank areas)
- Spacial relationships can be used to create DEPTH

Foreground, Middle Ground, Background

All images (especially landscapes) should have some kind of foreground, middle ground, and a background. This is a simple way to move your viewer's eye all around your image and even back in space

Unity by Ian David Soar

Light of the Gods by Kenart

Positive Space

- Positive space is space taken up by something - such as your subject.
- Abstract compositions are often all positive space.
- Don't be afraid to use open compositions which cut off parts of your subjects and fill the frame with the subject.

Neon by Jessica Walker

Negative Space

- Negative space is an “empty” or “blank” space, which may still have something in it.
- Negative space is what is in between all the positive space.
- Don't be afraid to use negative space in your images!

Birds on a hot tile roof by Citizen

Sojourn by Amy Weiss

Depth

Depth is created through:

- Overlapping
- Shading (tone)
- Linear perspective
- Atmospheric perspective

Note: If you are creating composite images in Photoshop, it is critical to understand these rules, as this will allow your images to retain a realistic quality.

Hope & Butterflies by Carol Knudsen

Overlapping

Overlapping subjects and adding shadows creates the feeling of depth

Soul Mirror by Sybille Sterk

Linear Perspective

Objects becoming smaller with distance
One and two point perspective adds depth

THE FALL by KEIT

Atmospheric Perspective

Detail, colour saturation and tonal contrast diminish with distance

Texture:

- The surface quality or feel of an object – its smoothness, roughness, softness, etc.
- Texture can be real (tactile) or implied.
- Textured background can help subjects to stand out.
- Textured skin adds character to interesting people, giving them a story – especially the elderly.
- Texture adds interest to an image – a sense of sight and touch is involved.
- Can add mood and emotive qualities to artworks.

Rough v's smooth:

Woman portrait III by Mark Smart

Nymph by Jessica Walker

Real Texture

Create real texture by:

- Printing on textured surface (e.g. canvas, wood, material)
- Photo transfers onto textured surfaces
- Using mixed media (e.g. photography + paint)
- Collage

sallymankusglove-web

Lucy Feng, laser-cut-portrait

Januz Miralles

Encaustic Wax 10, Michael Parker

Implied Texture

Can be created through:

1. Shooting textured subjects
2. Using strong side lighting
2. Adding textures in Photoshop
3. High ISO settings (grain/noise)
4. Multiple Exposure Photography

Blue Color Photography 08

Enigma-04 by Jeff Carter

Multiple Exposure Portraits by Christoffer Relander

I Won't Forget by Matteo Pontonutti

The Principles of Design

- The ways in which the Art Elements are arranged or organised within the frame of the photograph is referred to as The Design Principles.
- We use these arrangements to create artistic, interesting and more visually powerful photographs.

The Principles of Design Are:

1. Balance
2. Emphasis / Dominance
3. Contrast / Difference
4. Harmony / Similarity
5. Movement
6. Rhythm
7. Pattern / Repetition
8. Variety
9. Scale
10. Unity
11. Proportion / Distortion / Elongation

homeless-portraits-14_ Lee Jeffries

Balance

- Balance refers to the way in which the elements are arranged in the work to create a feeling of equilibrium.
- Ideally, we want our images to be balanced so that no single area of the image draws our eye so much that we get stuck there. Instead, our eye should be free to roam around the image and take it all in. A balanced image feels pleasing to the eye, and not lop-sided in any way.

Balance can be:

- Symmetrical,
- Asymmetrical (unbalanced),
- Weighed,
- Or Radial

Marcin Ryczek

Horizontal Symmetrical Balance

Symmetry can make or break the photographic composition. Symmetry offers organized and well balanced proportions to an image and thus heightens the sense of perfect synchronization among the elements present in the scene.

A Saucerful of Secrets by Dmitriy M

Vertical Symmetrical Balance

Silvia Grav 3

Bara Parsilova

Asymmetrical Balance

Marcus BjÅrkman

Weighted Balance

Visual weight is a concept that describes how much something in an image “pulls” your eye to look at it. Imagine that you have an almost entirely white image with a small black dot in it. That black dot will pull your eye immediately; it carries a lot of *visual weight*.

Every element in your composition carries a certain amount of visual weight. To keep your image balanced, you must compensate for each element with a counter-weight.

Be careful that you don’t have unintentional things in your picture that carry strong visual weight. These will take away from your main subject.

Carsten Meyerdierks

Radial Balance

Radial Balance is when your eye gets pulled into the centre of an image through a spiral motion.

[Ram Yoga](#), Argento Spiralis

Radial Bloom, Peter Wiarda

Oil vs Water Becomes Dirty Eye, Ram Yoga

Emphasis / Dominance

- Emphasis in a composition refers to developing points of interest to pull the viewer's eye to important parts of the image. This is often referred to as the focal point of an image.
- Special stress is given to one aspect within the design to make it stand out.
- Helps to grab and hold the viewer's attention.
- Can be created by using any Art element/s.
- Minimise distractions by using a shallow depth of field, utilising negative space or getting in close.

Set Fire to the Rain by Randy Monteith

Nacho Ormaechea

Contrast

- Difference between two or more elements in a composition
- Used to create interest or tension and make parts of the image stand out.
- Strong tonal contrast is almost an essential part of monochrome photography

Water-1 by Aliza Razell

Contrasting Shapes

- Contrasting Geometric and Organic shapes is an easy way to create emphasis in your images.

O) by Acid Mother

Time is an Illusion by Rozalia Toth

Contrasting Lines:

Paul Strand, *Porch Shadows*

Contrast in Tone

Omelette by Bluerose

Pages by Bluerose

Scissors by Bluerose

Explosion by Bluerose

Emptiness by Bluerose

Dark & bright side by Bluerose

Contrast in Colour

Caras Ionut

Contrast in Texture

Broken by Mary Catherine

I Build Walls by Rozalia Toth

Gavin Hammond

Harmony / Similarity

Harmony in an image is created by using similar qualities of specific art elements. For example, similar tones, lines or colours.

Gisèle Bédard

Loretta Lux, *Dorothea*, 2001

Broken Rake by Sybille Sterk

Movement

- Adds excitement to your work by showing action and directing the viewer's eye throughout the image
- In photography – movement can be created by using slow shutter speeds, panning or zooming while shooting, using strobe lights, post-production, multiple exposures, flash-sync, etc.

Djemma El Fna by Peter Hammer

Implied movement:

Introspection by Dwarkan

Rear Flash Sync:

Todd Klassy, *Dealing Cards*

Rhythm

- A regular repetition of elements to produce the look and feel of movement
- Repetitions at times can be monotonous. Introduce attractiveness to your captures by playing with the effects of lights and shadows.

Sitting Blue

By breaking the Rhythm of an image, you create tension and emphasis – think about it like a bridge in music

Abstract Minimalist Architecture Photography by Kai Zehl

Pattern and Repetition

Pattern made with repeated textures

Colors by JUSTART

- Repetition of one or more art elements to create a design or pattern.
- Fill the entire frame with the patterns to emphasize its effect.
- Exclude the background clutter
- Zoom-in the lines, use a telephoto lens and/or crop the final image to highlight the patterns.

Patterns made with repeated shapes or lines:

Alexey Menschikov

Vertical Blues by G Richard Anderson

Olive Cotton, *Tea Cup Ballet*, 1935

Variety:

- The use of differences and change to increase the visual interest of the work.

Philippe Halsman, *Popcorn Nude*, 1949.

Across The Sea.... by Carol Knudsen

Proportion / Distortion

- The comparative relationship of one part of an image to another part with respect to size, quantity, shape or degree
- Using certain lenses (particularly wide angles and fish eyes) can create in-camera distortions of subjects.
- Distortions of one part of an image can create emphasis - often to great effect and usually add meaning
- Caution must be taken not to overuse this technique or to use it in inappropriate situations (tendency to give people large noses!)

Loretta Lux

Elongation

VOLTRIKNESS by KEIT

SPOON WOMAN by KEIT

Scale:

Annie Leibovitz, Vogue do Alice

Matteo Pontonutti

Life on the back of a shell by Matteo Pontonutti

Tim Walker, *Doll Series*

Unity

- **Unity** occurs when all of the elements of a piece combine to make a balanced, harmonious, complete *whole*.

When unity is achieved:

- All aspects of the design complement one another rather than compete for attention.
- The key theme is communicated more clearly.
- The design will evoke a sense of completeness and organization.
- The viewer's eye will be lead around the whole composition.

Ansel Adams, Snake River

Edward Weston, *Nude*, 1936

Ian Plant, *Visual Flow*

Art Concepts

- Composition
- Juxtaposition
- Perspective

Trish Woodford

Trish Woodford, *Shadows I*

Composition:

- **Composition** is the artistic arrangement and placement of visual elements within the picture frame. It can also be thought of as the organization of the elements of Art according to the principles of design.
- **Composition** is the most difficult aspect of the *art* of photography to master, and also the most important.

Compositional Guidelines:

- Rule of Thirds
- Golden Mean
- Avoid bisecting image in half
- Leading Lines
- Lead Room
- Subject should move from left to Right
- Natural Framing
- Rule of Odds
- Simplify

Rule of thirds

Power points

Rule of thirds and power points

Golden Mean (Ratio 5:8)

Fibonacci Spiral

Avoid – bisecting image in half

Golden Mean:

Golden Mean

Don't bisect images in half

- unless purposefully balancing elements symmetrically

Fibonacci Spiral

Leading lines

- Leading lines lead the viewer's eye's towards the centre of interest.

Lead Room

Give your subject room to move or look:

Breaking the Rules:

Rudy Eryanto

Subject Should Look From Left to Right

- We read text from left to right, so we read images in the same way. Having subjects looking in this direction will help the composition to feel more comfortable.

Natural Framing

recognition of contribution

Cradle Mountain, Emma Gillette

Eye Of Time by Arla M. Ruggles

Rule of Odds

- Have an odd number of subjects in your frame (e.g. 1, 3, 5, 7)

Simplify:

- Get in closer
- Use shallow depth of field
- Keep backgrounds simple

Juxtaposition

- Positioning subjects next to each other in order to comment on one another.
- Usually used to portray a message.

*Just the Two of Us: Portraits of Cosplay
Enthusiasts in their Homes* by Klaus Pichler

Perspective

1. Where are you going to stand to create a powerful composition and portray meaning in your image?
2. Always walk around your subject first, then decide where to shoot from.
3. Experiment with your camera angle – get down low, climb up high, etc.
4. If you're not uncomfortable, it's probably not a good shot!

Low Camera Angles

can give power to the subject

High Camera Angles

can make subjects look vulnerable

Silvia Grav_2

Reserve shot. A high angle is employed to make the little girl appear weak and scared.
Matilda (2006)

Birds eye view

Birds eye views give the viewer an omniscient or voyeuristic perspective, giving them an insight into the life of the subject.

Annie Leibovitz, John Lennon and Yoko Ono

Move around your subject!

Shot from eye level – Boring!

More dynamic perspective and composition is created by stepping close to the tree and shooting up from underneath.

Utilising Foreground Interest

“The Amphitheatre” – Royal Natal N.P. – South Africa

The Inspiration

My attempts are as follows:

Chiaroscuro

The Amphitheatre by Emma Gillette Photography

Amphitheatre from the top!

In Conclusion:

- You need to know and understand the Art Elements, Design Principles and Compositional Guidelines in order to SEE them all around you.
- This awareness will help you to develop your creative photographic potential.
